

Eurex C7 Cleared Reports & Reconciliation Reference Manual

Comprehensive Documentation for Technical Integration, Field Mappings, and Back-Office Accounting Rules.

1. Eurex C7 XML Report Overview

Eurex Clearing operates the C7 Architecture, utilizing structured XML reports delivered via the Common Report Engine (CRE). Accurate integration requires distinguishing between fluid cash transactional logs and overall collateral pool evaluations.

Report ID	Official Name	Primary Objective	Key Target Metrics
CD710	Daily Cash Account Clearing Member	Bank-side and ledger cash reconciliation	Itemised cash transactions, banking inflows/outflows, assetSource.
CD020	Collateral Movement / Coverage	Real-time risk management and margin monitoring	Multi-asset pools (Cash + ISINs), coverValue, compliance surpluses/shortfalls.

2. Structural Architecture & Core Metadata Tags

assetSource (CD710 Specific): A three-character alphanumeric identifier indicating which upstream source or business line triggered a cash transaction.

- **ALL:** Shared transaction types applicable across multiple asset classes.
- **COL:** Cash movements explicitly tied to Collateral Management, Clearing Fund changes, or Margin Calls.
- **SEC:** Cash flows generated by Cash Markets (e.g., FWB, Repo markets, physical Eurex Deliveries).
- **ETD:** Exchange Traded Derivatives transactions (Futures and Options).

clntSegMod & CASSO (CD020 Specific):

- **clntSegMod (Client Segregation Model):** Defines the legal framework governing a specific collateral pool to guarantee asset protection under EMIR, LSOC, or standard regulations. Common values include **ISA** (Individual Segregated Account), **OSA** (Omnibus Segregated Account), **GOSA**, and **NOSA**.
- **CASSO (UK CASS Segregation):** Strings matching CASS or CASSO identify pools bound to the UK Financial Conduct Authority (FCA) Client Money and Asset Rules. Pledged assets within these pools are legally isolated under specific trust layouts and cannot offset house-level default risks.

3. Transaction Type (trnTyp7) Deep-Dive Dictionary

CD710 Cash Account Transaction Types

trnTyp 7	Eurex Technical Text	Cash Impact	assetSource	Definition / Use Case
200 / 202	MARGIN CALL	Debit (Out)	COL	Centralised cash pull to fund a collateral pool shortfall.
206 / 207	CASH COLLATERAL WDL / WDL1	Credit (In)	COL	Withdrawal of excess cash buffer back to clearing member bank.

224	PREMIUM PAID	Debit (Out)	ETD	Cash paid to buy option contracts during the trading day.
226	PREMIUM RECEIVED	Credit (In)	ETD / ALL	Cash collected from writing/selling options contracts.
235	VAR MARGIN RECEIVED	Credit (In)	ETD	Net gains on open futures/options positions via mark-to-market.
236	VAR MARGIN PAID	Debit (Out)	ETD	Net losses on open futures/options positions via mark-to-market.
294	CASH SETTLEMENT PAID	Debit (Out)	ETD	Realised cash settlement outflow at contract expiration.
296	CASH SETTLEMENT RCVD	Credit (In)	ETD	Realised cash settlement inflow at contract expiration.
324	POS TRF WITH CSH DEB	Debit (Out)	ETD	Cash debit tied directly to an outgoing position transfer.
325	POS TRF WITH CSH CRD	Credit (In)	ETD	Cash credit tied directly to an incoming position transfer.

CD020 Collateral Adjustments (Pool Metrics)

- **202 (Margin Call):** External deposit adding cash/eligible assets into a pool from the clearing bank.
- **207 (Cash Collateral WDL1):** External withdrawal taking excess cash out of Eurex to decrease total pool coverValue.
- **213 (Cash Collateral Transfer Deposit):** Internal pool inflow. Cash is moved into this pool directly from another internal corporate pool.
- **215 (Cash Collateral Transfer Withdrawal):** Internal pool outflow. Cash buffer is moved out of this specific pool into an alternative internal pool.

4. Back-Office Reconciliation & Logic Rules

The Core Cash Equation: To calculate your true Ending Cash Balance inside the CD710, use the sub-ledger equation:

$$\text{Ending Cash Balance} = \text{Beginning Balance} + \text{Sum(All Credits)} - \text{Sum(All Debits)}$$

The Equity Computation Trap:

Critical Rule: You must never blindly sum all trnTyp7 amounts together with the starting balance to calculate Total Trading Equity. Doing so causes severe double-counting due to the intersection of different ledgers.

1. **Trading Realised P&L; Ledger:** Group 235/236 (Variation Margin), 224/226 (Premium), and 294/296 (Cash Settlement) applying strict mathematical sign flags (+/-).
2. **Collateral Funding Ledger:** Separate 200/202 and 206/207. These adjust liquidity distributions between bank accounts and clearing pools, but they do not represent trading equity.
3. **Non-Cash Securities Assets:** Multi-asset valuation (Bonds/Equities tracked via ISINs) must be computed from the CD020 file's evaluation metrics, not the CD710.
